

1 ABSTRACT OF THE DISCLOSURE

2 A support truss for a messaging sign comprising an elevated box truss which
3 extends over a roadway and which has its opposite ends secured to upstanding
4 supports. The box truss is comprised of a plurality of box truss sections secured to one
5 another in an end-to-end relationship with at least one of the box truss sections adapted
6 to have one or more messaging signs mounted therein. The messaging signs are
7 horizontally slidably adjustably mounted on the box truss section so that the box truss
8 section can accommodate signs having various thicknesses. The box truss in which the
9 messaging sign is mounted is designed so that the face of the sign is unobstructed to
10 permit motorists to readily observe the messages on the sign. A walkway is provided
11 within the truss rearwardly of the messaging sign.
